

SPRUCE GUM

Spruce Gum....works great as an emergency patch on watercraft.

Ideally, it works best if heated in a tin can or a metal container over a fire until soft enough to pour.

Spruce gum can also be chewed and made pliable which will then stick to the surface of a canoe or boat like chewing gum.

COTTON BALLS SOAKED IN VASELINE

Cotton Balls soaked in Vaseline..... great fire starter!

Pull a few fine strands of Vaseline-soaked cotton ball apart and light with a lighter or flint match.

Cotton ball will burn for well over a minute which is ample time to start a good fire.

Make sure you store cotton balls in a water-proof container or zip-lock bag.
